LEO TRADING

Leo Trading Pvt Ltd

about Us

Established in 2002, Leo Trading has grown to become the largest and most renowned logistics company in the Maldives, facilitating the movement of over 80% of physical and industrial goods from origin to consumption, meeting the diverse needs of our customers. Leo Trading organization is unwavering in its commitment to delivering service excellence while fostering a culture of professional growth and advancement.

Leo Group always prioritizes in creating a dynamic work environment that empowers workforce through comprehensive training programs and providing excellent working conditions. Their strategic focus on exceptional customer service and employee development serves as the cornerstone of their philosophy, driving sustained success and operational excellence.

What began as a humble trading company in Malé, Leo Trading initially focused on wholesale FMCGs and industrial consumables.

With a competitive market landscape, the company's leadership recognized the need to pivot towards industrial goods and services, a shift that laid the foundation for future growth and success.

Today, Leo Trading stands as the largest logistics provider in the Maldives, managing the movement of over 80% of the country's physical and industrial goods. Their efficient and reliable services ensure that goods reach their destination promptly, meeting the diverse needs of businesses across the nation.

The company's areas of expertise include a broad range of services such as leasing heavy construction equipment, shipment and cargo clearance, discharging shipments, excavation, backfilling, compacting, and the construction of critical infrastructure like pipelines and sewerage systems.

With a team of over 600 employees across key locations, Leo Trading operates a vast fleet of over 100 vehicles, both on land and sea, including dhonis, barges, landing crafts, tugboats, speedboats, cranes, forklifts, excavators and more.

Additionally, the company uses heavy industrial machinery, such as generators, hydraulic hammers, and lighting towers, to support its extensive operations. This diverse range of equipment and services allows Leo Trading to address the most complex logistics and construction challenges in the Maldives.

From revolutionizing logistics in the Maldives to powering the nation's development, Leo Trading continues to set the benchmark for excellence, moving goods, services and industries forward.

Mission

To introduce and adapt international best practices in logistics, providing excellence in services that elevate the Maldives' logistics industry and drive sustainable growth.

Vision

To establish a significant presence in the Asian Region as a dominant logistics company.

CORE VALUES

Perseverance

Discipline

Dedication

Consistency

Integrity

The VISIONARY LEADER

Mr. Abdulla Sawad, the founder of Leo Trading, one of the Maldives' largest logistics companies, is a true embodiment of entrepreneurial spirit, vision, and resilience. With a relentless drive, exceptional leadership, and an innate ability to turn challenges into opportunities, Mr. Sawad transformed his humble beginnings as a small shop owner into the thriving logistics powerhouse it is today. Leo Trading now stands at the forefront of the industry, equipped with an extensive fleet of heavy-duty vehicles and industrial machinery.

Through his unwavering dedication, strategic foresight, and tireless work ethic, Mr. Sawad has proven that success in business is earned through persistence and innovation. His journey—from modest origins to becoming an industry leader—serves as an inspiration for aspiring entrepreneurs.

Mr. Sawad's journey is a testament to his ability to navigate challenges and seize opportunities. Recognizing the logistical difficulties posed by the Maldives' archipelagic geography, he strategically pivoted Leo Trading's focus towards industrial goods and services, a move that helped position the company for long-term success. His commitment to improving infrastructure, paired with his hands-on approach to leadership, allowed Leo Trading to grow rapidly, becoming the largest and most reliable logistics provider in the country.

Under his leadership, Leo Trading has not only expanded its fleet but also diversified its services to meet the evolving needs of the Maldives. Today, the company offers a wide range of services from leasing heavy construction equipment to providing cargo clearance and handling large-scale industrial projects.

Mr. Sawad's forward-thinking vision has set the company on a path of continued growth and innovation, positioning Leo Trading as a key player in the Maldives' economic development.

His story is a powerful reminder of how dedication, innovation and strategic thinking can transform a simple idea into a thriving business that impacts an entire nation.

MR. ABDULLA SAWAD

(Chairman & Managing Director)

INDUSTRY OVERVIEW

The Maldives is a picturesque archipelago consisting of over 1,000 tropical islands scattered across the Indian Ocean. Among these, 200 islands are inhabited, and more than 100 are dedicated to luxury resorts, with the number of resort islands growing each year.

However, the vast geographical spread of these islands, spread across multiple atolls, made the transportation and delivery of goods especially heavy industrial materials a logistical nightmare for many years. This posed significant challenges for both the government and local businesses, hindering economic development, infrastructure growth, and business expansion across the country.

In response to this pressing issue, Mr. Abdulla Sawad founded Leo Trading Pvt. Ltd. in 2002, with the clear vision of solving the logistical barriers that had long plagued the Maldives. His goal was to create efficient, reliable solutions for transporting goods, materials, and equipment to the scattered islands, ensuring the smooth flow of business and development. With determination and a deep understanding of the challenges posed by the island nation's geography, Leo Trading quickly grew into one of the Maldives' most prominent construction and logistics companies.

In just a few short years, Leo Trading emerged as the undisputed leader in both construction and logistics, playing a transformative role in the Maldives' economic and infrastructural growth.

By overcoming the complex challenges of island transportation, the company unlocked new opportunities for development, turning obstacles into stepping stones. Today, Leo Trading remains a cornerstone of the nation's progress, driving innovation, fostering business growth, and helping shape the Maldives into a thriving, connected hub in the Indian Ocean.

EXECUTIVE TEAM

MIFZAL MOHAMED

General Manager

Email: mifzal@leotrading.mv
Tel No. +960 798-5385

With a decade of experience at Leo Trading, Mifzal Mohamed serves as our General Manager, leading the company with vision and expertise. His comprehensive knowledge of the industry and exceptional management skills drive operational excellence, fostering innovation and teamwork to achieve outstanding results for our clients.

HASSAN SAEED

Assistant General Manager

Email: hassan.saeed@leotrading.mv
Tel No. +960 748-5375

With 8 years of service at Leo Trading, Hassan Saeed plays a crucial role as Assistant General Manager. His strong leadership skills and in-depth knowledge of operations drive the company's strategic initiatives and enhance overall performance, ensuring we meet our clients' needs effectively.

SHIFA MOHAMED SAEED

Chief Financial Officer

Email: cfo@leotrading.mv
Tel No. +960 955-5097

As Chief Financial Officer at Leo Trading for 6 months, Shifa brings invaluable financial expertise and strategic oversight to our operations. Her keen analytical skills and commitment to fiscal integrity ensure sound financial management, supporting the company's growth and sustainability in the competitive market.

AHMED SHIFAU

Operation Manager

Email: shifau@leotrading.mv
Tel No. +960 955-5108

Bringing 12 years of experience with Leo Trading, Ahmed Shifau expertly manages our operations, ensuring seamless coordination and efficiency across all projects. His dedication and strategic insight are vital to maintaining high standards and delivering exceptional service for our clients.

FATHUHULLA ABBAS

Workshop & Maintenance Manager

Email: fathuhulla@leotrading.mv
Tel No. +960 955 5383 | +960 778 5807

With 12 years at Leo Trading, Fathuhulla Abbas leads our Workshop & Maintenance team with unparalleled skill and dedication. His extensive experience ensures that all equipment and machinery operate at peak efficiency, supporting the smooth execution of our projects. Fathuhulla's expertise is integral to our commitment to quality and reliability.

ABDULLA SHAREEF

Leo Stores & Supply General Manager

IBRAHIM FASEEH

Addu Operation Manager

HUSSAIN ZUHURY

SSHE General Manager

HAZIM RASHEED

SASE Construction Pvt Ltd. Director

Our
FLEET

Sea **VESSELS**

Our extensive fleet of vessels provides safe, efficient and reliable sea transport for cargo and equipment, ensuring seamless connectivity across islands and delivering with precision and timeliness.

Leo Orbit L-278

They are common in commercial shipping and freight industries, as they can carry large quantities of cargo at a lower cost compared to other forms of transportation like trucks or trains, especially for long-distance waterway transport.

KEY FEATURES OF A BARGE

Flat Bottom

This allows them to navigate shallow waters where other boats may not go.

Cargo Capacity

They can carry a wide variety of goods, including coal, oil, construction materials, and agricultural products.

Low Draft

Since they are flat-bottomed, barges don't displace much water, making them ideal for areas with shallow or narrow waterways.

BARGE

Type of Hull : Steel

A barge is a flat-bottomed boat or vessel, typically used for transporting goods or materials on inland waterways, such as rivers, canals, and lakes. Barges are designed to carry heavy or bulky cargo, often in bulk and are usually propelled by towboats, tugboats, or sometimes motors.

CONVEYOR BARGE

Type of Hull : Steel

A conveyor barge is a type of barge that is equipped with a conveyor system for transporting bulk materials, typically in a continuous and efficient manner. The conveyor system on the barge allows for the loading and unloading of cargo without the need for cranes or other heavy equipment, making the process faster and more cost-effective.

Leo Empire L-414

KEY features of a CONVEYOR BARGE

Conveyor System

The barge is fitted with a conveyor belt or series of belts that move materials from one location to another. This can be from the barge to shore, or vice versa, allowing for easy transfer of bulk goods such as coal, grain, sand, or gravel.

Loading and Unloading

The conveyor system facilitates the loading and unloading of cargo directly onto or from the barge, often without the need for docking facilities, cranes, or other infrastructure.

Efficiency

Conveyor barges are often used in environments where bulk material handling needs to be continuous, such as in ports, mines, or construction sites where large volumes of materials need to be moved quickly and efficiently.

Uses of Conveyor Barges:

Mining

Transporting materials like sand, gravel, and minerals.

Ports and Terminals

Loading and unloading bulk goods from ships or trucks, often in places without extensive dockside infrastructure.

Dredging

Moving dredged materials from water bodies to shore.

In short, a conveyor barge offers a specialized, cost-effective solution for transporting large quantities of bulk materials on waterways, often using a conveyor to make the process more streamlined and less reliant on other heavy equipment.

Sri Lanka, and parts of India, such as Kerala. Dhonis are known for their distinctive design and are primarily used for fishing, transportation, and sometimes for tourism and leisure activities.

KEY FEATURES OF A DHONI

Design

Dhonis are typically small to medium-sized, with a curved hull and a single or double mast, depending on the design. The boat's shape allows it to navigate the shallow waters of coastal areas and coral reefs.

Construction

Traditionally made from wood, dhonis are crafted by hand, using local materials and methods passed down through generations. In modern times, some dhonis may be constructed using fiberglass or other materials, but many still retain their traditional wooden design.

Sails and Propulsion

Older dhonis are powered by wind through sails, while more modern versions may have engines for propulsion. The sails on a dhoni are usually triangular, and the boat can also be rowed manually.

Size

Dhonis come in various sizes, ranging from small single-person boats to larger ones that can carry several people or substantial amounts of cargo or fish.

In summary, a dhoni is a traditional and versatile boat, known for its distinctive appearance and important role in local cultures, especially for fishing and transportation in coastal regions.

DHONI

Type of Hull : Wood, Fiber

Dhoni is a traditional wooden boat commonly used in the Indian Ocean region, particularly in countries like the Maldives,

Uses OF A DHONI

Fishing

Traditionally, dhonis have been used by fishermen to venture into the ocean for fishing, often in shallow waters where larger boats cannot go.

Transportation

In many coastal regions, dhonis are used to ferry people and goods between islands, ports, or across other waterways.

Tourism

Dhonis are popular with tourists in places like the Maldives, where they are used for sightseeing, snorkeling, diving excursions, and as part of luxury resorts' services.

Cultural Significance

The dhoni is an integral part of maritime culture in the Indian Ocean region, symbolizing the relationship between the local people and the sea.

PASSENGER DHONI

Type of Hull : Wood, Fiber

A Passenger Dhoni is a traditional Maldivian boat designed for transporting people between islands. It serves as a vital mode of transportation in the Maldives, especially for locals and tourists.

KEY FEATURES OF A PASSENGER DHONI

Capacity & Seating

Can accommodate anywhere from 10 to 100+ passengers, depending on the size and design.

Safety Equipment

Includes life jackets, lifebuoys, and fire extinguishers to meet safety regulations.

Fuel Efficiency

Typically powered by diesel engines, with some modern models using hybrid or solar technology.

Eco-Friendly

Some dhonis are now equipped with solar panels or electric engines for sustainable travel.

Uses OF A PASSENGER DHONI

Public Transport

Regular ferry services between inhabited islands.

Tourism & Excursions

Used for resort transfers, snorkeling trips, and island-hopping tours.

Private & VIP Transfers

Customized dhonis for luxury transport and private charters.

Workforce Transport

Moving employees between islands, resorts, and worksites.

L-082 LEO EAGLE

CARGO DHONI

Type of Hull : Wood, Fiber

A Cargo Dhoni is a traditional Maldivian wooden boat (dhoni) used for transporting goods and supplies between islands. It is an essential part of logistics in the Maldives, especially for businesses that need to move cargo efficiently across the atolls.

KEY FEATURES OF A CARGO DHONI

Structure & Build

Made from durable wood or fiberglass, featuring a flat deck for easy loading and unloading, with a reinforced hull for carrying heavy loads.

Cargo Capacity

Can transport various goods, from small packages to heavy materials, with storage compartments and optional covered cargo areas for protection.

Weather Adaptability

Built to withstand rough seas and monsoon conditions, often featuring canopies or tarpaulin covers for cargo protection.

Engine & Fuel Efficiency

Typically powered by diesel engines for long-distance transport, with some models incorporating solar or hybrid options for better fuel efficiency.

Uses OF A CARGO DHONI

Commercial Transport

Used by businesses to move goods such as construction materials, food supplies, and retail products.

General Logistics & Delivery

Plays a crucial role in distributing goods across different atolls.

Resort & Tourism Supply

Transports food, beverages, and essential goods to resorts and guesthouses.

L-362 LEO PEARL

LANDING CRAFT

Type of Hull : Steel

Landing craft is a type of specialized boat or vessel designed to transport people, vehicles, or cargo from sea to shore, typically during amphibious operations. Landing crafts are crucial for military, humanitarian, and logistical purposes, especially when a shoreline lacks port facilities, or when a direct, large-scale assault or delivery is required on land.

KEY FEATURES OF LANDING CRAFT

Shallow Draft

Landing crafts are designed with a shallow draft, meaning they can operate in shallow waters, including beaches or areas near shorelines, where larger ships cannot go.

Shore Landing Capability

Many landing crafts are equipped with a bow ramp, which can be lowered to allow vehicles and personnel to directly drive off onto the shore. This is especially useful in military landings, where quick disembarkation is crucial.

Varied Sizes and Capacities

Landing crafts come in various sizes, from small, relatively simple boats that carry a few people or small loads, to larger versions capable of carrying military vehicles (like tanks or trucks), equipment, or large numbers of troops.

Adaptability

Some landing crafts are designed for transporting troops and small vehicles, while others are specialized for carrying heavy equipment, supplies, or even large military vehicles like amphibious assault vehicles.

In summary, a landing craft is a versatile vessel designed to deliver goods, vehicles, or personnel from ships to shore, particularly in environments where conventional docking facilities are unavailable. They are crucial in both military and civilian applications, allowing operations in remote or shallow coastal areas.

PASSENGER BOAT

(SUPPORT BOAT)

Type of Hull : Fiber

P

assenger boat is a type of watercraft specifically designed to carry people from one location to another across bodies of water, such as rivers, lakes, or seas. These boats can range in size from small ferries to large ocean liners, and they are primarily used for transportation rather than cargo.

Passenger boats are used for various purposes, including public transport, tourism, and leisure activities. They are designed for safety, comfort, and efficiency, often equipped with seating, life-saving equipment, and amenities for passengers.

L-518 LEO FLASH 2

SPEEDBOAT

Type of Hull : Fiber

S

peedboat is a type of motorized boat designed for high-speed travel on water. These boats are specifically built for performance, offering quick acceleration and high top speeds compared to other types of boats. Speedboats are often used for recreational purposes, including watersports, racing, and leisure cruising, but they can also serve commercial or military functions.

KEY FEATURES OF A SPEEDBOAT

Powerful Engine

Speedboats are equipped with powerful engines, often inboard or outboard motors, that provide the necessary thrust for high-speed travel. The size and horsepower of the engine can vary depending on the type of speedboat.

Hydrodynamic Hull Design

The hull of a speedboat is usually designed to reduce drag and allow for smooth, fast movement across the water. The shape often includes a deep V or a planing hull, which helps the boat lift out of the water at high speeds, reducing resistance.

Lightweight Construction

Speedboats are typically built with lightweight materials like fiberglass or aluminum to maximize speed and agility. This also helps them achieve faster acceleration and higher speeds than heavier boats.

Maneuverability

Speedboats are designed to be highly maneuverable, making sharp turns and quick changes in direction easier, which is especially important for watersports and racing.

Overall, a speedboat is a fast, motorized boat designed for speed, performance, and agility on water. It is widely used for recreation, racing, military applications, and some commercial purposes, with its powerful engine, lightweight design, and specialized hull making it ideal for high-speed travel.

TUGBOAT

Type of Hull : Steel

Tugboat is a powerful, small to medium-sized vessel designed primarily to tow or push larger ships, barges, and other vessels. Tugboats are essential in various maritime operations, particularly in harbor and port areas, where their strength and maneuverability help guide and move ships in confined or shallow waters.

Key Functions of a Tugboat

Towing

Tugboats tow large ships or barges, often assisting in navigation through difficult waters, such as narrow channels or harbors.

Pushing

Instead of towing, some tugboats push vessels, often pushing barges or large ships alongside them, helping them move into dock or around tight areas.

Maneuvering

Tugboats are frequently used to assist large vessels in maneuvering in crowded or constrained spaces, such as when docking or undocking from piers.

Escort Services

Tugboats also provide escort services to ensure the safety of vessels through hazardous waters or when navigating challenging conditions like storms or ice.

KEY FEATURES OF A TUGBOAT

Powerful Engines

Tugboats have robust engines that give them the power to move much larger vessels.

Compact Size

Despite their strength, tugboats are relatively small and agile compared to the vessels they tow or push.

Highly Maneuverable

Tugboats are designed to be highly maneuverable, often using a variety of propulsion systems such as a propeller, or even azimuth thrusters that allow them to move in any direction with great precision.

UTILITY BOAT

Type of Hull : Steel

COMMON USES OF UTILITY BOAT

Transporting Supplies and Personnel

They are used to ferry workers and equipment to and from offshore oil rigs, ships, or platforms.

Support for Construction and Maintenance

Utility boats may assist in the construction, inspection, and maintenance of marine structures like piers, docks, and buoys.

Search and Rescue

Some utility boats are equipped for emergency response, including search and rescue operations in coastal or offshore areas.

Utility boat is a type of watercraft designed for a wide range of practical, functional purposes, primarily in industrial, commercial, or service applications. These boats are versatile and can be used in various settings such as ports, harbors, offshore platforms, and coastal waters. Utility boats are typically smaller and more robust than passenger boats and are built to handle tasks like transporting goods, personnel, equipment, and performing specific functions.

Patrol and Security

Used by law enforcement or security personnel to monitor harbors, docks, and other waterway areas.

Fishing Support

In commercial fishing, utility boats are often used for various tasks such as transporting fishermen, nets, and catch back and forth from shore.

Utility boats are typically built to be durable and practical, often featuring a flat bottom or shallow draft for operating in shallow waters. They may have specialized equipment like cranes, winches, or cranes for various tasks, and can be powered by engines, motors, or in some cases, by sail.

Land **VEHICLES**

Our wide and diverse fleet of land vehicles enables efficient and dependable delivery of essential equipment and commodities across the Maldives, including to the most remote areas.

BOOM LIFT

Energy Type : Diesel

*B*oom lift is a type of aerial work platform (AWP) used to provide temporary access to elevated work areas. It consists of a platform or bucket attached to the end of a hydraulic arm (the "boom"), which can be extended and elevated to reach heights that would otherwise be difficult to access using ladders or scaffolding.

TWO MAIN TYPES OF BOOM LIFT

Telescoping Boom Lift

This type has a straight arm that extends and retracts to reach greater heights, often used for vertical access in areas with less horizontal space.

Articulating Boom Lift

This lift has a jointed or hinged arm, which allows for more flexible movement, allowing the platform to reach around obstacles or work in tight spaces. It can move both vertically and horizontally.

L-553 JLG 860SJ

Leo Trading Pvt Ltd

BULLDOZER

Energy Type : Diesel

A bulldozer is a large, heavy-duty machine used in construction, mining, and agricultural operations for tasks that involve moving, pushing, or clearing large amounts of material like soil, rubble, sand, or snow. It is equipped with a wide, heavy blade at the front, which can be adjusted to move materials in various directions.

L-311 CATERPILLAR D6R

L-311 CATERPILLAR D6R

KEY features of a BULLDOZER

Track System

Bulldozers typically use tracks (caterpillar tracks) instead of wheels. This helps distribute the machine's weight evenly, providing better traction and stability, especially on rough or uneven ground.

Blade

The most prominent feature of a bulldozer is its large, horizontal blade. The blade can be raised, lowered, tilted, and angled, depending on the type of task. There are different types of blades, such as straight, angled, or universal blades, each designed for specific jobs.

Engine

Bulldozers are powered by large, high-torque engines capable of generating significant force to move heavy materials.

Size and Weight

Bulldozers come in various sizes, ranging from smaller models suitable for light landscaping or trenching work, to massive ones used in large-scale construction and mining projects.

Uses of Bulldozer:

Earthmoving

- Clearing land, leveling surfaces, or digging trenches.

Construction

- Preparing sites for new buildings or infrastructure.

Mining and Quarrying

- Removing overburden or digging in mines.

Roadwork

- Clearing paths or leveling roads.

Snow removal

- In some regions, bulldozers are used for snow clearing in winter.

Bulldozers are known for their strength and versatility, making them essential for many heavy-duty tasks in various industries.

+9609555096

Leo Trading Pvt Ltd

26

L-447 KATO SR700L

CRANE

Energy Type : Diesel

KEY FEATURES OF A CRANE

Boom

A long arm that supports the load and extends horizontally or vertically. It can be fixed or telescopic (extendable).

Hoist

A mechanical device used to lift and lower the load. It typically includes a winch, motor, and cables or chains.

Hook or Attachment

A device attached to the hoist that grips or secures the load. Other attachments might include buckets, magnets, or specialized lifting gear.

A crane is a large, mechanical machine used to lift, move, and lower heavy loads or materials in construction, manufacturing, shipping, and other industries. Cranes typically have a hoist (a lifting mechanism), a boom (a long arm), and a hook or other attachment to carry and move loads. Cranes are essential for tasks that involve moving materials to great heights or over distances that would be difficult or impossible with manual labor.

Rotating Mechanism

Many cranes can rotate their boom and hoist to lift materials in different directions. This is especially true for mobile cranes or tower cranes.

Base or Chassis

This provides the stability for the crane. Depending on the type, the base could be a stationary platform, a truck, or a tracked or wheeled chassis.

COMMON USES OF CRANES

Construction

Lifting and placing materials such as steel, concrete, and building components.

Shipping and Ports

Loading and unloading cargo from ships.

Mining and Quarrying

Moving large amounts of rock, equipment, and materials.

Industrial and Manufacturing

Moving heavy items in factories, assembly lines, or storage areas.

L-268 TADANO GR250N-1-00201

Cranes come in various sizes and capacities, with some capable of lifting hundreds of tons, making them indispensable for large-scale operations requiring the movement of heavy loads.

CRANE CRAWLER

Energy Type : Diesel

Crawler crane is a type of crane that is mounted on a set of tracks, or "crawlers," instead of wheels. This track-based system allows the crane to move across rough, uneven, or soft ground with great stability and without the need for additional support or outriggers. Crawler cranes are especially useful in construction, heavy lifting, and industrial projects where the terrain is difficult, such as in quarries, mines, or off-road construction sites.

KEY FEATURES OF A CRANE CRAWLER

Crawler Tracks

These are heavy-duty, continuous tracks (like those on a bulldozer or tank) that provide superior stability and traction on challenging surfaces. The tracks help distribute the crane's weight evenly, reducing the risk of sinking into soft ground or becoming unbalanced.

Mobility

Unlike stationary cranes, crawler cranes can move across the job site, though they are slower than cranes mounted on wheels. They are designed for travel on uneven terrain, unlike wheeled cranes, which may need to be transported via trailers to different locations.

Lifting Capacity and Reach

Crawler cranes come in various sizes and lifting capacities, from smaller models lifting a few tons to large models capable of lifting hundreds of tons. They are often used to lift heavy, bulky loads at great heights or over long distances.

Stability

The wide base provided by the crawlers makes them extremely stable during lifting operations. This stability is crucial for handling heavy loads or operating in environments where the ground may not be level or firm.

Versatility

Many crawler cranes have a telescoping boom (extendable arm) or jib (a horizontal arm) to allow for greater flexibility in reaching higher or further areas.

COMMON USES OF CRANE CRAWLER

Construction

Crawler cranes are used on construction sites to lift heavy materials such as steel beams, concrete panels, and machinery. Their stability makes them ideal for lifting loads in areas where other cranes may be unstable or unable to operate.

Offshore Oil and Gas

These cranes are frequently used for lifting heavy equipment on offshore oil platforms or in maritime environments, where ground conditions may be unpredictable.

Mining and Quarrying

Crawler cranes help move large amounts of earth, machinery, or materials in rough terrains like quarries, mines, or construction sites with challenging ground conditions.

Heavy Industry

They are also used in industrial settings, such as moving massive machinery in factories or refineries.

CRANE LORRY

Energy Type : Diesel

A crane lorry (also known as a truck-mounted crane or lorry crane) is a type of vehicle that combines a crane and a truck, enabling it to transport loads and lift heavy materials in one machine. This versatile vehicle features a mounted crane on the truck bed, making it ideal for construction, logistics, and other industries that require both transportation and lifting capabilities.

KEY FEATURES OF A CRANE LORRY

Truck Base

The vehicle is built on a truck chassis, making it capable of driving on roads and highways. It is typically equipped with wheels and a standard truck cabin for the driver.

Mounted Crane

The crane is mounted on the truck bed or chassis, and it usually includes a boom (a long, extendable arm) and a lifting mechanism (such as a hook or winch). The crane allows the truck to lift and move heavy materials without the need for additional lifting equipment at the job site.

Hydraulic or Electric Operation

The crane is typically operated using hydraulics, which allow for smooth and efficient lifting, extension, and rotation of the crane arm. Some models may use electric or diesel engines to power the crane.

Versatility

Crane lorries are often used for both transporting goods and lifting them into place. The crane can extend and reach over obstacles, which is helpful in construction or industrial environments where lifting materials to elevated positions is required.

Range of Sizes

Crane lorries come in various sizes and lifting capacities. Smaller models are used for lighter tasks, such as moving construction materials, while larger models can lift hundreds of tons for heavy-duty operations.

COMMON USES OF A CRANE LORRY

Construction

Lifting building materials such as concrete, steel beams, or machinery onto construction sites or into positions where a larger crane cannot reach.

Logistics and Delivery

Used by logistics companies to deliver and unload heavy or bulky items (such as construction equipment, shipping containers, or pallets of materials) at various locations.

Industrial Applications

Moving heavy machinery or equipment in factories, warehouses, or industrial plants, especially when there is a need to lift and move items in tight spaces.

Utility and Infrastructure

Used by utilities or infrastructure companies for lifting and installing large components such as poles, transformers, or HVAC units.

L-183 KOBELCO RK500

MOBILE CRANE

Energy Type : Diesel

M

obile crane is a type of crane mounted on a wheeled chassis or a crawler base, designed for easy mobility across different job sites. Unlike stationary cranes, which are fixed in one location (such as tower cranes), mobile cranes can travel on public roads and are used in various industries, including construction, shipping, and infrastructure projects. These cranes are versatile, able to lift heavy materials and move them across different terrains with ease.

KEY FEATURES OF A MOBILE CRANE

Mobility

Mobile cranes are designed to be self-propelled, meaning they can move without the need for external transportation. Depending on the type, they can travel on wheels (wheeled mobile cranes) or tracks (crawler mobile cranes).

Boom

Mobile cranes are equipped with a boom, which is a long arm that extends and raises to lift and move heavy loads. The boom may be telescoping (extendable) or fixed, depending on the crane model.

Hydraulic System

Most mobile cranes operate using hydraulic power to lift, extend, and maneuver the boom. The hydraulic system allows the crane to handle heavy loads with precision and smooth movement.

Rotating Base

Many mobile cranes have a rotating upper part (the "turntable" or "slewing" mechanism), allowing the crane to rotate 360 degrees to position the boom and load in different directions.

Counterweights

To maintain stability when lifting heavy loads, mobile cranes are equipped with counterweights that balance the crane's weight and prevent tipping.

Outriggers (Stabilizers)

Mobile cranes often have outriggers (extendable legs) that are deployed to stabilize the crane while lifting heavy loads. These outriggers provide additional support to keep the crane balanced during operation.

PICK & CARRY CRANE

Energy Type : Diesel

Pick and Carry Crane is a type of mobile crane that is specifically designed to lift and move (or “pick and carry”) heavy loads while traveling on a job site. Unlike traditional mobile cranes, which require outriggers for stability when lifting, a pick and carry crane is able to lift loads while remaining in a stable, mobile position, without the need for additional stabilization.

These cranes are typically compact, maneuverable, and suited for lifting and transporting materials across short distances on construction sites, factories, and other environments.

KEY FEATURES OF A PICK AND CARRY CRANE

Compact Design

Pick and carry cranes are usually smaller and more compact than other cranes, making them ideal for use in tight spaces or areas with limited room for maneuvering.

All-Terrain Capability

These cranes are designed to work in a variety of terrains, including rough or uneven ground. Some pick and carry cranes have wheels or tracks (depending on the model) that allow them to move easily across construction sites.

Lift and Transport

The main feature of a pick and carry crane is its ability to pick up a load, carry it over a distance, and then place it down again without needing to set up outriggers or additional stabilization.

Maneuverability

These cranes are typically highly maneuverable, allowing operators to navigate through narrow or crowded job sites. They often have a smaller turning radius compared to other types of cranes.

Lifting Capacity

While pick and carry cranes are not as heavy-duty as larger cranes, they are still capable of lifting and carrying loads in the range of several tons, depending on the model.

DUMP TRUCK

Energy Type : Diesel

Dump truck (also known as a tipper truck or dump lorry) is a type of truck designed to transport loose materials like sand, gravel, dirt, or debris. The defining feature of a dump truck is its hydraulic lift system, which allows the truck's bed to tilt and dump its load, typically at the back, into a designated area. This makes dump trucks highly effective for construction, mining, and demolition work.

USES OF DUMP TRUCKS

Construction

Transporting construction materials such as sand, gravel, concrete, and other bulk items.

Mining

Moving mined materials from extraction sites to processing areas.

Landscaping

Hauling large amounts of soil, mulch, and other landscaping materials.

Demolition

Removing debris and waste from demolition sites.

Road Work

Carrying dirt, asphalt, and other materials for road construction or repairs.

In summary, dump trucks are essential vehicles in industries that require the transport of loose materials. They are designed for efficiency, with a tipping bed that allows for quick unloading, making them indispensable on construction sites, mines, and many other large-scale projects.

ADVANTAGES OF DUMP TRUCK

Efficient Loading and Unloading

The hydraulic dump bed makes unloading materials much faster compared to manual methods.

Heavy Load Capacity

Dump trucks are designed to carry substantial loads, with some models capable of carrying tons of material at once.

Versatility

They can be used in various industries, from construction and mining to agriculture and waste management.

EXCAVATOR

Energy Type : Diesel

An excavator is a heavy construction and mining equipment used primarily for digging, lifting, and moving large quantities of earth, rock, or debris. It is a versatile machine that can be equipped with various attachments, making it useful for a wide range of tasks on construction sites, quarries, or other industrial projects. Excavators are commonly referred to as diggers in many parts of the world due to their primary function.

USES OF EXCAVATORS

Digging

Excavators are primarily used for digging trenches, holes, and foundations for construction projects.

Earthmoving

They move large amounts of earth or debris, such as rocks, soil, and gravel, from one location to another.

Demolition

With specialized attachments (e.g., hydraulic breakers or shears), excavators can be used for demolishing buildings, structures, or other hard materials.

Mining

Excavators are used in mining operations for tasks like overburden removal, digging, and material handling.

Landscaping

In addition to excavation work, they can be used for tasks like grading, leveling, and clearing land.

Lifting and Material Handling

Excavators can also be equipped with various attachments (e.g., grapples, magnets) for lifting and handling materials like pipes, steel beams, or logs.

ADVANTAGES OF DUMP TRUCK

Versatility

With different attachments (such as buckets, augers, hammers, and grabs), excavators can perform various tasks, including digging, demolition, lifting, and more.

Power and Efficiency

Excavators are designed to handle heavy-duty tasks efficiently, moving large volumes of material quickly.

Maneuverability

Crawler excavators are stable and capable of operating in difficult terrains, while wheeled excavators are more mobile on smoother surfaces.

Precision

Excavators allow operators to dig with great precision, making them ideal for tasks that require accuracy, such as trenching and foundation digging.

In summary, an excavator is a crucial piece of machinery in construction, mining, and other industries, known for its ability to dig, move materials, and perform various tasks with power and precision. Its versatile design allows it to be adapted with different attachments for specific functions, making it a highly useful and essential tool for heavy-duty projects.

FORKLIFT

Energy Type : Diesel

Forklift is a type of industrial vehicle used to lift, move, and stack heavy materials, typically within warehouses, factories, or construction sites. It has a set of fork-like prongs at the front that can be raised or lowered to lift items, such as pallets, boxes, or other goods. Forklifts are powered by internal combustion engines or electric motors, and they come in a variety of sizes and configurations depending on the job requirements.

KEY FEATURES OF FORKLIFT

Forklift

The horizontal arms that lift and carry loads.

Mast

The vertical component that allows the forks to raise and lower.

Lift Capacity

Forklifts have different weight capacities, typically ranging from 1,000 to 20,000 lbs.

Steering

Depending on the model, forklifts may have rear or front-wheel steering for maneuverability in tight spaces.

Forklifts are crucial in material handling and logistics, helping with tasks like loading and unloading trucks, organizing inventory, and transporting goods within storage areas.

TELEHANDLER FORKLIFT

Energy Type : Diesel

Telehandler Forklift is a versatile piece of construction and industrial equipment. It is used to lift and move heavy loads, often in environments like construction sites, farms, or warehouses.

KEY FEATURES OF A TELEHANDLER FORKLIFT

Telescopic Boom

The defining feature is its long, extendable boom that can reach heights or extend forward, allowing the telehandler to access areas that are difficult to reach with a standard forklift.

Lifting Capacity

Telehandlers can lift heavy loads, usually ranging from 4,000 to 12,000 pounds, depending on the model.

Versatility

It can be fitted with various attachments such as forks, buckets, lifts, and more, making it useful for a variety of tasks including lifting materials, digging, or even snow plowing.

Maneuverability

Many telehandlers have 4-wheel drive and 4-wheel steering, providing excellent maneuverability on rough terrain.

Cabin

The operator sits in a cabin with controls that allow the lifting arm to extend, retract, and move in different directions, offering high visibility and control.

TELESCOPIC FORKLIFT

Energy Type : Diesel

A telescopic forklift, also known as a telehandler (or telescopic handler), is a type of forklift equipped with a telescoping boom. This boom can extend forward and upward, making it highly versatile and ideal for lifting and placing loads at various heights and distances.

KEY FEATURES OF A TELESCOPIC FORKLIFT

Telescopic Boom

The key feature is the boom that can extend horizontally and vertically. This allows the forklift to reach heights and locations that standard forklifts cannot, such as high shelves or elevated work areas.

Lifting Capacity

Depending on the model, telescopic forklifts can handle loads between 4,000 and 12,000 pounds (1,800 to 5,400 kg), though larger models can lift even heavier loads.

Versatility

Telescopic forklifts can be fitted with different attachments, including standard forks, buckets, lifting hooks, and even a personnel platform, allowing it to perform a variety of tasks.

Four-Wheel Drive (4WD)

Many telehandlers come with four-wheel drive, making them effective on rough, uneven terrain, which is common on construction sites or agricultural environments.

Maneuverability

Many models have a 4-wheel steering system, which enhances their maneuverability, particularly in tight or confined spaces.

Operator's Cabin

Operators sit in a fully enclosed cab, providing visibility and control over the lift function. The controls allow operators to raise, extend, retract, and tilt the boom for precise placement of materials.

BACKHOE LOADER

Energy Type : Diesel

A backhoe loader is a versatile heavy construction machine that combines the capabilities of a loader (front-end bucket) and a backhoe (digging arm). It's often used for tasks like digging, lifting, and loading material.

USES OF BACKHOE LOADER

These machines are widely used in construction, landscaping, demolition, and roadwork projects for tasks like digging, trenching, material handling, and lifting.

Backhoe loaders are popular because they offer a combination of power, flexibility, and compact size, making them effective for smaller, medium-sized projects.

KEY FEATURES OF A BACKHOE LOADER

Front Loader

The front part of the machine features a large bucket for lifting, scooping, and moving materials such as dirt, gravel, and debris.

Backhoe

The rear of the machine is equipped with a hydraulic arm and a bucket, designed for digging and excavation. It can be used to dig trenches, holes, and foundations.

Mobility

Typically mounted on wheels or tracks, backhoe loaders are known for their maneuverability on construction sites, especially in areas with limited space.

Attachments

Depending on the job, backhoe loaders can be equipped with various attachments, such as forks, hydraulic hammers, and augers, to increase their versatility.

SKID LOADER

Energy Type : Diesel

A skid loader (also called a skid steer loader) is a compact, highly maneuverable construction vehicle used in a variety of industries for digging, lifting, carrying, and other tasks. It is known for its ability to turn in tight spaces and for having a small turning radius, making it suitable for work in confined areas.

KEY FEATURES OF A SKID LOADER

Compact Size

They are smaller and more versatile than other construction equipment, making them ideal for working in tight spaces.

Four-Wheel Drive

The vehicle has a unique drive system where each wheel is driven independently, allowing for exceptional maneuverability.

Skid Steering

The term "skid steer" comes from the vehicle's steering system, which allows it to pivot or "skid" in place by rotating the wheels on either side of the machine in opposite directions.

Hydraulic Arms

Skid loaders typically have a front-end bucket or attachment that can be raised, lowered, tilted, and operated with hydraulic arms. They can also be fitted with various attachments like forks, augers, or grapples for specialized tasks.

Versatility

They are often used for a wide range of tasks, including earthmoving, material handling, grading, and demolition, making them essential on construction sites, landscaping, and agricultural operations.

SIDE LOADER & LIFTER

Energy Type : Diesel

A side loader is a type of vehicle or machine that is designed to load, unload, or transport materials using a lifting mechanism located on the side of the vehicle, as opposed to the front or back. These loaders are often used in industries such as waste management, construction, and material handling. Side loaders are known for their ability to efficiently handle long or bulky items and navigate tight spaces.

KEY FEATURES OF SIDE LOADERS

Side-mounted Lifting Mechanism

Whether for waste collection or material handling, the key feature of a side loader is the arm or mechanism mounted on the side of the vehicle for lifting and carrying materials.

Efficiency in Tight Spaces

Side loaders are ideal for working in environments where access is limited, such as narrow roads, alleys, or construction zones.

Heavy-Duty Capability

Side loaders can handle large and heavy items, making them suitable for a wide range of industries.

Side loaders are widely used for their efficiency, ability to handle large or long materials, and maneuverability in tight spaces.

WHEEL LOADER

Energy Type : Diesel

A wheel loader is a type of heavy construction equipment used to move materials like dirt, sand, gravel, or snow. It consists of a front-mounted bucket or scoop that can be raised and lowered, and the machine is powered by wheels rather than tracks, which makes it faster and more versatile on hard surfaces like pavement.

KEY FEATURES OF A WHEEL LOADER

Bucket

The bucket at the front is used for scooping, lifting, and transporting materials. It can be detached and replaced with other attachments like forks or snow plows.

Wheeled Design

Unlike tracked loaders, wheel loaders use rubber tires, which allow for faster movement and better maneuverability on solid ground.

Hydraulic System

Wheel loaders use hydraulic power to raise, tilt, and operate the bucket and other attachments.

Cab

The operator sits in a cab that provides control over the loader's movements and attachments.

Versatility

Depending on the attachments, a wheel loader can perform a variety of tasks, such as lifting, digging, and even grading.

MOTOR GRADER

C/W RIPPER

Energy Type : Diesel

A

Motor grader is a heavy construction machine used primarily for grading and leveling the ground. It is equipped with a long adjustable blade that can be raised, lowered, and tilted to shape or level surfaces, making it ideal for tasks like road construction, maintenance, and landscaping.

KEY FEATURES OF A MOTOR GRADER

Blade

The most notable feature is the long, straight blade mounted between the front and rear axles. This blade is adjustable in height, angle, and tilt, allowing the operator to create a smooth, level surface.

Articulating Frame

Most motor graders have an articulating frame, meaning the front and rear parts of the machine can pivot at a joint, improving maneuverability and making it easier to work in tight spaces.

Wheeled or Tracked

Motor graders are usually wheeled machines, though there are tracked versions for use in softer or more uneven terrain. Wheeled graders are commonly used on paved surfaces, while tracked versions are more suited to rough or unpaved ground.

Hydraulic System

The blade's position is controlled by hydraulic cylinders, allowing for precise adjustments while working.

Cab

The operator sits in a high-positioned cab, providing good visibility of the work area. Modern motor graders often have advanced controls for precise operation and comfort.

PRIME MOVER

Energy Type : Diesel

Prime mover is designed to be powerful and durable, enabling it to pull large, heavy loads over long distances. It is commonly equipped with high-horsepower engines (often ranging from 300 to 600 horsepower), which help to handle the weight of the loaded trailer and provide fuel efficiency for long-haul operations.

TYPES OF PRIME MOVER IN TRANSPORT

Heavy-duty Trucks

These are the large vehicles used for transporting goods, often equipped with powerful diesel engines, robust transmission systems, and strong chassis.

Road Trains

In some countries (e.g., Australia), a prime mover can pull multiple trailers connected together, known as a "road train."

PRIME MOVERS IN INDUSTRIAL & POWER GENERATION

Turbines

(Steam, Gas, or Hydro) are often used as prime movers in power plants. They drive generators to produce electricity.

Electric Motors

are also used as prime movers in many industries, such as manufacturing and mining, where they power machinery like pumps, conveyors, and compressors.

ADVANTAGES OF PRIME MOVERS

Efficiency

They convert fuel or electrical energy into mechanical energy to power equipment and vehicles.

Versatility

Prime movers can be used in a variety of applications, from trucks to industrial machinery and power plants.

Power Output

Designed to deliver the necessary power to perform heavy-duty tasks like hauling loads or driving machinery.

PILING MACHINE

Energy Type : Diesel

COMMON USES OF PILING MACHINES

Foundation Work

Piling is used to create deep foundations for buildings, bridges, or other structures in areas where the surface soil is too weak to support the weight.

Marine Piling

Piling machines are used in marine environments to create foundations for structures like piers, docks, and offshore platforms.

A piling machine is a type of heavy construction equipment used to install piles into the ground to provide foundational support for structures such as buildings, bridges, and other large infrastructure projects. Piles are long, slender columns, often made of steel, concrete, or timber, that are driven deep into the ground to transfer the load of a structure to deeper, more stable soil or rock layers. The piling machine is essential for foundation work in areas where the surface soil is not strong enough to support heavy loads.

Ground Stabilization

Piling can also be used for soil stabilization in areas with soft ground or where there's a risk of shifting or settling.

Bridges and Dams

In bridge construction or dam building, piling is used to anchor the structure to deep, stable soil or bedrock.

ROLLER COMPACTOR

Energy Type : Diesel

A roller compactor is a heavy machine used in construction and civil engineering for compacting soil, asphalt, and other materials. The primary purpose of a roller compactor is to increase the density of materials by applying pressure through rolling or vibrating actions. It is commonly used in road construction, earthwork projects, and the laying of foundations to ensure that the ground or surface is stable, smooth, and firm.

HOW ROLLER COMPACTORS WORK?

Compaction Process

The machine moves forward or backward, pressing the material underneath it. As it rolls over the material, the force from the weight of the roller and, in some models, vibration, compacts the material to a desired density.

Vibration

In vibratory roller compactors, vibrations increase the efficiency of compaction by reducing air pockets in the soil, which allows for higher density compaction in less time.

USES OF ROLLER COMPACTORS

Road Construction

To compact layers of asphalt or soil to create a stable foundation for roads.

Soil Stabilization

In construction projects where soil needs to be compacted to ensure a strong base for buildings or pavements.

Landfill Compaction

To compact waste in landfill sites.

Foundation Work

Ensuring a solid base for structures.

SITE DUMPER

Energy Type : Diesel

A site dumper is a compact, off-road vehicle designed for transporting and dumping materials around a construction site. These vehicles are essential for moving bulk materials such as soil, sand, gravel, debris, or concrete. Site dumpers are particularly useful in environments where larger vehicles cannot operate effectively, such as narrow or uneven terrain.

USES OF SITE DUMPER

Construction Sites

Site dumpers are widely used for transporting materials such as concrete, dirt, and gravel around construction sites, often to and from excavation zones.

Landscaping

Site dumpers help in moving soil, mulch, and other landscaping materials.

Demolition

After demolition, these vehicles are used to transport rubble, debris, and scrap materials away from the site.

Quarries & Mining

Site dumpers may also be used to carry aggregates or minerals from extraction areas to storage or processing zones.

Roadworks and Infrastructure

They are essential in moving asphalt, aggregates, and other materials in road-building or infrastructure projects.

SCISSOR LIFT

Energy Type : Diesel

A scissor lift is a type of aerial work platform used to elevate workers or equipment to high positions. It is characterized by a scissor-like mechanism that allows the platform to rise vertically when the crisscrossing arms (resembling a pair of scissors) extend. Scissor lifts are commonly used in construction, maintenance, and other industries where access to elevated areas is required for tasks like repairs, installations, or inspections.

APPLICATIONS OF SCISSOR LIFTS

Construction

Scissor lifts are widely used for tasks such as installing lights, repairing ceilings, or working on building exteriors. They allow workers to safely reach elevated areas without scaffolding.

Warehouses and Storage Facilities

For retrieving items stored at high levels or organizing stock.

Maintenance

Used for inspecting and maintaining machinery, HVAC systems, and electrical equipment in high or hard-to-reach areas.

Event Setup

Setting up decorations, lighting, or sound systems at events or venues.

Painting and Decorating

Allowing workers to reach high walls or ceilings for painting or other finishing tasks.

TANKER TRUCK

Energy Type : Diesel

Tanker truck is a large vehicle designed to transport liquids or gases. These trucks are equipped with a specialized tank or container that holds and transports various substances, such as fuel, chemicals, water, or food-grade liquids.

KEY FEATURES OF A TANKER TRUCK

Tank

The main compartment that stores the liquid or gas. It is typically cylindrical or spherical to ensure proper containment.

Pump

Some tanker trucks are equipped with pumps for loading and unloading liquids efficiently.

Material

Tanks are often made from durable materials like aluminum, stainless steel, or carbon steel to withstand the weight and pressure of the contents.

Safety features

Tanker trucks may include multiple safety mechanisms like pressure relief valves, emergency shut-off valves, and fire suppression systems, particularly if transporting hazardous materials.

Size and Capacity

Tanker trucks can range in size, with typical capacities between 5,000 to 11,000 gallons (or more), depending on the truck and its intended purpose.

These trucks are commonly used in industries such as petroleum, food, chemicals, and construction.

TRAILER

Energy Type : Diesel

Trailer is an unpowered vehicle designed to be towed by a motorized vehicle, such as a truck, car, or tractor. It is commonly used for transporting goods, equipment, or other items that cannot fit within the vehicle itself. Trailers come in various sizes and types depending on their intended use.

TYPES OF TRAILER

Flatbed Trailer

A flat platform without sides or a roof, used for transporting large, heavy, or bulky items like construction equipment or shipping containers.

Enclosed Trailer

A fully enclosed trailer with walls and a roof, designed to protect goods from the elements. Often used for cargo like electronics, furniture, or sensitive materials.

Refrigerated Trailer (Reefer)

A temperature-controlled trailer used for transporting perishable goods such as food, pharmaceuticals, or chemicals.

Tanker Trailer

Similar to a tanker truck but in trailer form, used for transporting liquids like fuel, chemicals, or water.

Car Hauler Trailer

Designed specifically for transporting vehicles, often featuring multiple levels for loading several cars at once.

Utility Trailer

A small, often open trailer for personal or light-duty hauling needs, such as transporting small amounts of furniture or landscaping materials.

Livestock Trailer

Designed to carry animals, often featuring ventilated sides and adjustable stalls for safety and comfort.

KEY FEATURES OF A TRAILER

Axles

Trailers typically have one or more axles that support the weight of the trailer and its cargo.

Hitch

A device that connects the trailer to the towing vehicle. Common types include ball hitches, fifth-wheel hitches, or gooseneck hitches.

Brakes

Some trailers, especially larger ones, are equipped with their own braking systems to help control the vehicle during towing.

Suspension

Trailers may have spring or air suspension systems to help distribute weight evenly and provide smoother rides for the cargo.

SERVICES

LEO Trading offers a comprehensive range of services

USES OF TRAILER

Transportation

Primarily used for moving goods, machinery, livestock, or recreational vehicles.

Construction

Moving building materials, machinery, and equipment to and from construction sites.

Recreational

Towable trailers, like travel trailers or camper trailers, are used for camping and long-distance travel.

Agricultural

Used on farms for hauling grain, equipment, or livestock.

Trailers are a vital part of logistics and transportation in industries like freight, agriculture, and recreation.

CUSTOM BROKER SERVICE

Leo Trading offers 24/7 comprehensive customs brokerage solutions, ensuring seamless and efficient clearance for goods entering the Maldives. With deep knowledge of regulatory requirements, we expedite the process, reducing delays and facilitating smooth entry for all shipments.

Our experienced team provides personalized support, managing every detail from documentation to compliance, making logistics hassle-free for clients.

CARGO CLEARANCE

Leo Trading provides efficient, expert cargo clearance services, handling shipments of all sizes from small parcels to large industrial cargo. With a highly experienced team, we specialize in the seamless clearance of all types of cargo, ensuring timely processing and strict compliance with regulations. Whether it's small parcels or large-scale industrial shipments, we cater to a diverse range of business needs. Our track record includes successfully managing notable projects exclusively for our clients, underscoring our commitment to precision and excellence. Partner with Leo Trading for seamless cargo clearance that drives business growth and operational efficiency.

HEAVY LIFTING

Leo Trading excels in heavy lifting operations, equipped with a fleet of high-capacity cranes and specialized machinery to manage complex projects, safely moving heavy loads across various terrains. With extensive experience in the Maldives, Leo Trading handles heavy cargo transport, including the transport of generators to remote islands and designated sites on land. Our expert team ensures that every operation is carried out with the highest standards of safety and efficiency, providing customized lifting solutions for any scale of project.

EXCAVATION, BACKFILLING & COMPACTION

Leo Trading provides expert excavation, backfilling, and compaction services with a diverse fleet of machinery for all your needs. Our extensive fleet includes over 50 excavators, ranging from mini-excavators to the powerful SK480, making us the most reliable provider of these services in the Maldives. Additionally, we offer high-bed excavators and spud barges operated by some of the most experienced personnel in the country. We are also fully equipped to provide and operate the machinery required for the construction of underwater pipelines and sewerage systems, ensuring the highest standards of service across all projects.

STEVEDORING & HANDLING BULK SHIPMENT

Leo Trading offers advanced stevedoring services with cutting-edge equipment, ensuring the safe and efficient handling of bulk shipments. As one of the most experienced and well-known stevedores in the country, we utilize the latest machinery and equipment to optimize loading and unloading processes, minimizing downtime.

Whether handling large or small shipments, we guarantee the most efficient cargo handling, regardless of size, form, or container. Our expertise and technology ensure timely and secure transportation of bulk cargo to and from ships, meeting the highest standards of service in the industry.

LAND TRANSPORTATION

Leo Trading, as the Maldives' leading provider of land transportation, operates a vast fleet of heavy-duty trucks and specialized vehicles, offering tailored solutions to meet the specific needs of various projects. We proudly own the largest fleet of land vehicles in the Maldives. Our reliable fleet with an extensive range ensures that we can handle any land transportation challenge, delivering efficient solutions for both large and small-scale projects.

RESCUE & SALVAGE

Leo Trading offers expert rescue and salvage services with skilled teams and robust equipment, ensuring efficient recovery in even the most challenging conditions across the Maldives. As the largest logistics company in the country, a large part of our daily operations includes rescue and salvage. With the heaviest equipment and vessels capable of handling any terrain in the Maldives, we are the first, and sometimes only choice, for any rescue or salvage operation in the country. Our extensive experience and resources ensure quick and reliable solutions for all emergency situations.

SEA TRANSPORTATION

Leo Trading guarantees reliable and efficient sea transportation, tailored to your needs. Our extensive fleet includes a variety of vessels, enabling us to easily handle both local and international transport network projects. Whether it's large shipments, specialized items, or time-sensitive deliveries, we ensure timely and safe transportation across seas, providing customized solutions for every project. Our expertise and diverse fleet make us the go-to choice for all sea transportation requirements.

DEMOLITION & GARBAGE DISPOSAL

Leo Trading specializes in safe, efficient demolition and waste disposal, emphasizing environmental protection. Our fleet, featuring spud barges and excavators, ensures effective and eco-conscious operations. Demolition and garbage disposal operations are among the most challenging services we provide, as protecting the country's fragile environment is of the utmost importance. Leo Trading utilizes the safest and most suitable equipment for such tasks, including spud barges for working in shallow water, which are invaluable for water-villa reconstruction projects. Additionally, excavators with jackhammers operated by skilled operators and supervisors make us the perfect team for the job. Using our own landing crafts, barges, and tugboats, we handle garbage disposal in the safest and most economical way possible.

LEO STORES AND SUPPLY PVT LTD

Leo Stores and Supply is a leading provider of a diverse range of construction, marine, hardware, and equipment, ensuring material availability for all projects. Leo Trading constantly strives to source materials that are suited to the unique environmental conditions of the Maldives, focusing on products with the least environmental impact. Our products are regularly restocked to ensure that clients' projects are never interrupted due to material shortages. With a commitment to quality and sustainability, Leo Stores and Supply is your reliable partner for all project material needs.

ROCK BOULDERS SUPPLY

Leo Trading supplies premium rock boulders for construction, landscaping, and marine projects, ensuring a steady and reliable material source. Our boulders are carefully sourced to guarantee durability and versatility for a variety of applications. Whether for large-scale construction, landscaping features, or marine projects, we provide consistent and timely delivery to meet your needs. With a strong focus on quality and reliability, Leo Trading ensures your project stays on schedule by supplying the right materials exactly when you need them.

LEASING & SUPPLY OF HEAVY VEHICLES & CONSTRUCTION EQUIPMENT

Leo Trading offers leasing and supply of durable heavy vehicles, construction equipment, and machinery for industrial use, providing reliable solutions for diverse project needs. Our extensive fleet includes a wide range of machinery, from heavy-duty vehicles to specialized construction equipment, designed to handle various tasks in construction, infrastructure, and industrial projects. Whether you need equipment for short-term or long-term use, we ensure flexibility, availability, and quality to meet your project requirements. With a focus on reliability and performance, Leo Trading is your trusted partner for all heavy equipment leasing and supply needs.

LEO ENGINEERING & LATHE WORKSHOPS

Leo Engineering & Lathe Workshops offers custom fabrication and precision lathe work, providing specialized engineering services for various industries. Our team is skilled in delivering tailored solutions, whether for small-scale repairs or large industrial projects. We use advanced machinery and techniques to ensure high accuracy and quality in all our work, making us a trusted partner for engineering, fabrication, and lathe services. With a focus on precision and reliability, Leo Engineering & Lathe Workshops supports a wide range of industries, ensuring that every project meets the highest standards of excellence.

BOAT YARD WITH MAINTENANCE & DRY DOCKING

Leo Trading's boatyard offers full-service repairs, maintenance, and dry docking for vessels of all sizes, ensuring reliable service for your maritime needs. Our facility is equipped with state-of-the-art technology and skilled professionals capable of handling any vessel type. Whether it's routine maintenance, complex repairs, or dry docking, we provide timely, high-quality services that keep your vessel in optimal condition. With a focus on reliability and efficiency, Leo Trading's boatyard ensures your vessels stay operational and well-maintained, meeting industry standards for safety and performance.

BOAT BUILDING

Leo Trading offers expert boat-building services, using high-quality materials and craftsmanship for exceptional marine projects. Our skilled team ensures every boat is constructed with precision, attention to detail, and the durability required for marine environments. Whether building new vessels or customizing designs to meet specific project needs, we deliver reliable and long-lasting boats that exceed expectations. With a focus on quality and craftsmanship, Leo Trading guarantees the highest standards in boat building for a wide range of marine applications.

TRANSPORTATION SOLUTIONS FOR REPLANTATION PROJECTS

Leo Trading offers sustainable transport services, designed to support replantation and environmental restoration projects with efficiency and reliability. Our fleet is equipped to handle the unique demands of replantation, ensuring the safe and timely transport of plants, equipment, and materials to restoration sites. We are committed to minimizing environmental impact while providing effective solutions for ecological projects. With a focus on sustainability and efficiency, Leo Trading supports the success of replantation and environmental restoration efforts across the Maldives.

FUEL PUMP REPAIR & MAINTENANCE

Leo Trading provides specialized fuel pump repair and maintenance services, ensuring optimal performance and reliability for all types of pumps. Our team of skilled technicians is equipped to handle a wide range of fuel pump models, offering precision repairs and maintenance that keep your equipment running smoothly. Whether it's routine servicing or more complex repairs, we ensure quick turnaround times and minimal downtime. With a focus on quality and efficiency, Leo Trading guarantees reliable fuel pump performance, supporting the needs of various industries in the Maldives.

Leo Southern Operation Centre (Addu City)

Leo Southern Operation Centre (Addu City)

Ibrahim Faseeh
(Addu Operation Manager)

Leo Southern Operation Centre (LEO SHUTTLE), based in Addu City, serves as a strategic hub delivering seamless logistical support and unmatched operational efficiency across the southern atolls. Equipped with cutting-edge facilities and a dedicated team, they excel in managing diverse needs, including heavy machinery operations, rentals, supply and delivery, excavation, treading, and both sea and land transportation. Additionally, they offer city bus and speedboat services, ensuring comprehensive and reliable solutions tailored to client requirements.

Logistics Services

With over 12 years of expertise in the Southern Maldives, we are a trusted leader in delivering seamless logistics solutions tailored to your business needs.

Our Competitive Edge

Extensive Experience: We specialize in managing complex logistics with ease.

Skilled Professionals: A dedicated team ensuring timely and hassle-free delivery.

Modern Resources: State-of-the-art equipment and vehicles for efficient operations.

With a proven track record and a focus on innovation, we are your go-to partner for seamless logistics solutions in the Southern Maldives.

Customs Clearance

We handle all customs-related formalities for containers and cargo with precision, saving you time and effort.

Transportation Services

Safe and reliable delivery of cleared cargo and containers to your doorstep, ensuring your goods arrive on time.

Container Destuffing

Professional unloading of materials from containers, minimizing damage and ensuring efficient handling.

Bulk Shipment Stevedoring

Efficiently managing bulk shipments from mother ships to client locations using advanced Landing Craft Tanks (LCTs).

Heavy Machinery Solutions

We specialize in the safe lifting, transporting, and positioning of heavy-weight items such as machinery, monuments, and vehicles. Our team of expert technicians and operators ensures every operation is handled with precision.

Our Capabilities

- Heavy-duty cranes and equipment for complex lifting tasks.
- Safe and secure transportation of oversized items.
- Fully trained operators with a focus on safety and efficiency.

With cutting-edge technology and a commitment to excellence, we are your trusted partner for heavy machinery solutions.

Comprehensive Supply and Delivery Services

We are your go-to partner for sourcing and delivering essential materials across the Southern Maldives.

We Supply

- Vehicle spares for smooth operations.
- High-quality lubricants to maintain your equipment.
- Cement bags and construction materials to support your projects.

Delivery Options

- Timely delivery to your location upon request.
- Tailored solutions to match your schedule and requirements

Our commitment to quality and reliability makes us the preferred choice for supply and delivery services.

Flexible Equipment Rental Services

Our rental solutions are designed to adapt to your specific requirements, offering unparalleled flexibility and value.

Options Available

- Equipment and vehicles with skilled operators.
- Tailored rental plans: hourly, daily, monthly, material-wise, container-wise, CBM-wise, or MT-wise.

Our Competitive Edge

- A wide range of well-maintained equipment and vehicles.
- Professional operators ensuring smooth operations.
- Transparent pricing with no hidden costs.

Excavation and Treading Expertise

Whether you're preparing a construction site or undertaking a landscaping project, our excavation and treading services deliver results with precision and efficiency.

Features of Our Service

- Advanced machinery for accurate digging and grading.
- Skilled operators ensuring safe and efficient operations.
- Reliable support for projects of all sizes.

Let us handle the heavy lifting while you focus on your vision.

Sea Transportation Services

Navigating the beautiful waters of the Southern Maldives, we provide reliable sea transportation solutions.

Our Services

- Transporting bulk cargo, heavy machinery, and vehicles between islands.
- Leveraging our fleet of Landing Craft Tanks (LCTs) for safe and efficient operations

Our Competitive Edge

- Proven track record of timely deliveries.
- Expert crews trained in handling diverse cargo.
- Modern vessels designed for operational excellence.

Trust us to bridge the distance across the islands with ease

Reliable Land Transportation

From the heart of the island to its farthest corners, we ensure smooth land transportation for all your needs.

Services Offered

- Bulk cargo and machinery transport using heavy-duty trucks.
